Guntur, Andhra Pradesh, India

PROFESSIONAL SUMMARY

Motivated undergraduate student pursuing a Bachelor of Technology in Artificial Intelligence and Machine Learning with a strong academic record. Interested in Web development, Machine Learning, Data Analytics, and Recommender Systems. Experienced in building websites, data-driven applications including recommendation systems, exploratory data analysis pipelines, and algorithmic simulations using Python. Skilled in statistical analysis, machine learning algorithms, and data visualization techniques. Completed Django Web Development training through APSSDC with exposure to backend web development and database integration.

TECHNICAL SKILLS

Programming: Python, SQL

Data Analysis: Pandas, NumPy

Machine Learning: Scikit-learn, Classification Models, Recommender Systems

Visualization: Matplotlib, Seaborn(Basic)

Web Technologies: HTML, CSS, Javascript

Frameworks: Django(Basic)

AI Tools: Chatgpt, Claude, Gemini

Tools & Platforms: Git, GitHub, Streamlit, Jupyter Notebook, Anaconda, VS Code

Concepts: Machine Learning, Data Analysis, Algorithms, Probability & Statistics

PROJECTS

Personal Portfolio Website

-  Developed a responsive portfolio website using HTML, CSS, and JavaScript.
-  Designed pages for About, Projects, and Contact information.

Movie Recommendation System (Collaborative Filtering)

- Built a movie recommendation system using the MovieLens dataset.
- Constructed a user–movie interaction matrix using Pandas pivot tables.
- Calculated movie similarity using cosine similarity from scikit-learn.

- Implemented a recommendation function to suggest similar movies.
- Optimized performance by precomputing and storing the similarity matrix.
- Developed an interactive interface using Streamlit for real-time recommendations.

Student Performance Data Analysis

- Conducted exploratory data analysis on a student performance dataset using Python and Pandas.
- Computed statistical metrics including mean, median, and standard deviation of scores.
- Analyzed relationships between study hours, attendance, internet access, and academic performance.
- Created visualizations including histograms, boxplots, scatter plots, and correlation heatmaps.
- Automated saving of charts and statistical summaries for reproducible analysis.

Fair Resource Allocation Simulation

- Designed a simulation to allocate limited resources among agents based on ranked preferences.
- Implemented a greedy allocation algorithm to assign resources efficiently.
- Evaluated fairness using satisfaction score and preference rank distribution metrics.
- Conducted simulation experiments with randomized agent ordering.
- Compared greedy allocation with random assignment to analyze performance differences.

Credit Card Fraud Detection using Machine Learning

- Developed a machine learning classification system to detect fraudulent transactions.
- Performed preprocessing and feature analysis on transaction data.
- Trained models including Logistic Regression and Random Forest using scikit-learn.
- Evaluated performance using accuracy, precision, recall, and confusion matrix.

EDUCATION

Bachelor of Technology (B.Tech) – Artificial Intelligence & Machine Learning
Vasireddy Venkataadri Institute of Technology, Andhra Pradesh

Expected Graduation: 2028

CGPA: 9.38 / 10

RELEVANT COURSEWORK

Web Development
Machine Learning
Data Structures and Algorithms
Database Management Systems
Probability and Statistics
Data Analytics
Artificial Intelligence Fundamentals

LANGUAGES

English, Hindi, Telugu
